

BRAINSTORM & IDEA PRIORITIZATION

Standard Laptop Procurement Automation

Team ID	6aba11b55015c35b98631d18
Project Name	Standard Laptop Procurement Automation

Step 1: Team Gathering, Collaboration and Select the Problem Statement

Problem Statement

Manual IT hardware procurement processes can cause delays, inconsistent task assignment, and errors in creating and managing hardware configuration tasks. When a Standard Laptop request is approved, IT teams may need to manually create and assign a Catalog Task to the Hardware team, increasing processing time and reducing task visibility.

Problem to Solve

How can ServiceNow automate the creation and assignment of hardware procurement tasks after a Standard Laptop request is approved?

Key Problems Identified

- Manual creation of Catalog Tasks
- Manual assignment of tasks to the Hardware team
- Delays after request approval
- Possibility of human errors
- Inconsistent task assignment and limited task visibility
- Delayed start of laptop configuration

Step 2: Brainstorm, Idea Listing and Grouping

Idea	Description
Automatic Task Creation	Create a Catalog Task when the Standard Laptop request is approved.
Automatic Assignment	Assign the task directly to the Hardware team.
Approval-Based Trigger	Run the automation only after the request receives approval.
Flow Designer Automation	Connect approval, requested item, and catalog task processes.
Task Visibility	Make the task available for the Hardware team to track and process.
Error Reduction	Reduce mistakes by removing repetitive manual steps.
Faster Processing	Help the Hardware team begin configuration promptly.

Grouping of Ideas

- **Request & Approval:** Standard Laptop request; Requested Item; approval process.
- **Automation:** Flow Designer; approval-based trigger; automatic task creation.
- **Hardware Processing:** Catalog Task; Hardware team assignment; laptop configuration.
- **Benefits:** Faster processing; fewer manual errors; better visibility; consistent workflow.

Step 3: Idea Prioritization

Priority	Idea	Reason
1	Automatic Catalog Task Creation	Core requirement of the automation.
2	Automatic Assignment to Hardware Team	Removes manual task assignment.
3	Approval-Based Flow Trigger	Ensures task creation follows approval.
4	Flow Designer Integration	Connects the workflow steps.
5	Task Visibility	Helps the Hardware team track and process the task.
6	Error Reduction	Minimizes errors from repetitive manual work.
7	Faster Processing	Reduces the delay between approval and configuration.

Final Selected Idea

Automated Standard Laptop Procurement Workflow using ServiceNow Flow Designer

When a Standard Laptop request is submitted through the Service Catalog and approved, Flow Designer automatically creates a Catalog Task and assigns it to the Hardware team. The team can then begin laptop configuration without manually creating or assigning the task.

Proposed Workflow
