Customer Problem Statement – PS-1

I am (Customer)	An IT employee or requester who needs a Standard Laptop through the organization's ServiceNow Service Catalog.
I'm trying to	Request and receive a Standard Laptop efficiently after my request gets approved.
But	After approval, the hardware configuration task may need to be manually created and assigned to the Hardware team.
Because	The current process requires manual task creation and assignment, which can cause delays, inconsistent processing, and human errors.
Which makes me feel	Frustrated and uncertain about the status and processing time of my laptop request.

Customer Problem Statement – PS-2

I am (Customer)	A Hardware team member responsible for processing approved laptop requests.
I'm trying to	Start configuring the laptop as soon as an approved request is received.
But	I may have to wait for someone to manually create and assign the Catalog Task.
Because	There is no automatic transition from the approved Standard Laptop request to the hardware configuration task.
Which makes me feel	Delayed in starting my work and concerned about maintaining a consistent and efficient procurement process.

Final Customer Problem Statement

IT requesters and Hardware team members need a faster and more consistent way to process approved Standard Laptop requests because manual Catalog Task creation and assignment can cause delays, errors, and poor task visibility.
